

COLOCATION

- » Carrier-class space with diverse entry connectivity and redundant power
- » Controlled and secure environment
- » Flexible, service-related relationship without the burden of hidden fees

COLOCATION

Your business is moving more data than ever before. And issues such as disaster recovery, regulatory compliance and reducing IT costs are driving the need to design more efficient networks. If you're looking for a more affordable way to safely transmit data and Internet traffic to an off-site location, our Colocation solution might be right for you. It offers a reliable communication path between locations. At the same time, it can clear the way for you to manage network connections and store data faster and more economically.

THE FIBERTECH SOLUTION

Our colocation services include a protected environment for storing your mission-critical data. Our carrier-neutral facilities provide an abundance of power, system redundancy and common access points from multiple carriers. You'll have access to our high-capacity fiber networks and state-of-the-art data transport services. You'll also have:

- › Carrier-class hosting facilities with customized design
- › Uninterruptible DC power
- › DC Power: 20 amps, -48 volts
- › HVAC
- › 24x7 security including camera surveillance
- › Individually locking cabinets and cages available
- › Card-key access and monitoring of systems
- › Half rack and larger configurations
- › Diverse fiber entrances and riser systems

THE FIBERTECH BENEFITS

DIVERSITY

Network connections in point-to-point or ring configuration plus access to multiple-access vendors.

CONVENIENCE

The flexibility of customized solutions for interconnection with many other network providers.

SECURITY

Redundant and diverse off-site connections provide the most protection for your data.

ON-NET

Direct fiber connections from your business to our colocation facility.

THE FIBERTECH ADVANTAGE

All Fibertech business solutions are delivered on end-to-end fiber optics that seamlessly connect all of your business locations. These directly routed services mean greater availability and flexibility compared to other legacy carriers. What's more, we own our entire 20-market network footprint, so you're assured faster provisioning times and best-in-class implementation processes that are truly in sync with your needs.

THE FIBERTECH DIFFERENCE

Fibertech is committed to providing a customer experience like no other. In addition to our well-earned reputation for service dependability and flexible solutions, we're dedicated to customer responsiveness and providing a first-class approach to customer service. And we have the customer success stories to prove it.

At the heart of our customer service approach is the Technical Assistance response team and Network Operations Center (NOC). This group of seasoned network engineers is available to answer your technical questions, assist in troubleshooting issues, engineer new applications and direct field engineers to your facility for on-site technical assistance. They're not just our team, they're your team. They understand transmission technology, as well as how to deliver it in a way that makes the most sense for you.
